## The Front-End Checklist

The Front-End Checklist Application is perfect for modern websites and meticulous developers!

★ Generated on http://frontendchecklist.com ★

**Project Name** Enterprise Page title or URL #snowfall-it Developer's name or team Daily Bruin

11/51 ✓ high priority 4/25 ✓ medium priority

2/16 ✓ low priority

# HEAD

63 % Head items are ✓

This is head intro

- Doctype: The Doctype is HTML5 and is at the top of all your HTML pages.
- Charset: The charset declared (UTF-8) is declared correctly.
- X-UA-Compatible: The X-UA-Compatible Meta tag is present.
- Viewport: The viewport is declared correctly.
- Title: A title is used on all pages
- Description: A meta description is provided, it is unique and doesn't possess more than 150 characters.
- **Favicons:** Each favicon has been created and displays correctly.
- Apple Touch Icon: Apple touch favicon apple-mobile-web-app-capable are present
- Windows Tiles: Windows tiles are present and linked.

- Canonical: Use rel="canonical" to avoid duplicate content.
  - 1 <!-- Helps prevent duplicate content issues -->
  - 2 <link rel="canonical" href="http://example.com/2017/09/a-new-article-to-red.html">

  ☐ 5 common mistakes with rel=canonical Google Webmaster Blog <

  https://webmasters.googleblog.com/2013/04/5-common-mistakes-with-relcanonical.html?
  ref=frontendchecklist >
- Language attribute: The <code>lang</code> attribute of your website is specified and related to the language of the current page.
- Direction attribute: The direction of lecture is specified on the html tag (It can be used on another HTML tag).
- Alternate language: The language tag of your website is specified and related to the language of the current page.
- Conditional comments: Conditional comments are present for IE if needed.
- RSS feed: If your project is a blog or has articles, an RSS link was provided.
- Inline critical CSS: The inline critical CSS is correctly injected in the HEAD.
- CSS order: All CSS files are loaded before any JavaScript files in the HEAD
- Facebook Open Graph:

All Facebook Open Graph (OG) are tested and no one is missing or with a false information. Images need to be at least 600 x 315 pixels, 1200 x 630 pixels recommended. Using og:image:width and og:image:height will specify the image dimensions to the crawler so that it can render the image immediately without having to asynchronously download and process it.

# HTML

12 % HTML items are ✓

This is html intro			
• 🗸	HTML5 Semantic Elements: HTML5 Semantic Elements are used appropriately (header, section, footer, main).		
• 🗆	Error pages: Error 404 page and 5xx exist		
• 🗆	<b>Noopener:</b> In case you are using external links with target="_blank", your link should have a rel="noopener" attribute to prevent tab nabbing. If you need to support older versions of Firefox, use rel="noopener noreferrer"		
• 🗆	Clean up comments: Unnecessary code needs to be removed before sending the page to production.		
• 🗆	W3C compliant: All pages need to be tested with the W3C validator to identify possible issues in the HTML code.		
• 🗆	HTML Lint: I use tools to help me analyze any issues I could have on my HTML code.		
•	Link checker: There are no broken links in my page, verify that you don't have any 404 error.		
• 🗆	Adblockers test: Your website shows your content correctly with adblockers enabled		
WE	EBFONTS 0 % Webfonts items are ✓		
• 🗆	Webfont format: WOFF, WOFF2 and TTF are supported by all modern browsers.		
•	Webfont size: Webfont sizes don't exceed 2 MB (all variants included).		
• 🗆	Webfont loader: Control loading behavior with a webfont loader.		
CS	S 17 % CSS items are ✓		
• 🗆	Responsive Web Design: The website is using responsive web design.		
•	CSS Print: A print stylesheet is provided and is correct on each page.		

Unique ID: If IDs are used, they are unique to a page. Reset CSS: A CSS reset (reset, normalize or reboot) is used and up to date. JS prefix: All classes (or id- used in JavaScript files) begin with js- and are not styled into the CSS files. Embedded or inline CSS: Avoid at all cost embeding CSS in <style> tags or using inline CSS Vendor prefixes: CSS vendor prefixes are used and are generated accordingly with your browser support compatibility. Concatenation: CSS files are concatenated in a single file (Not for HTTP/2). Minification: All CSS files are minified. Non-blocking: CSS files need to be non-blocking to prevent the DOM from taking time to load. **Stylelint:** All CSS or SCSS files are without any errors. Responsive web design: All pages were tested with the correct breakpoints. CSS Validator: The CSS was tested and pertinent errors were corrected. Desktop Browsers: All pages were tested on all current desktop browsers (Safari, Firefox, Chrome, Internet Explorer, EDGE...) Mobile Browsers: All pages were tested on all current mobile browsers (Native browser, Chrome, Safari...) OS: All pages were tested on all current OS (Windows, Android, iOS, Mac...) **Reading direction:** All pages need to be tested for LTR and RTL languages if they need to be supported. 0 % JavaScript items are ✓ **JAVASCRIPT** JavaScript Inline: You don't have any JavaScript code inline (mixed with your HTML code). Concatenation: JavaScript files are concatenated. Minification: JavaScript files are minified (you can add the .min suffix). JavaScript security: Non-blocking: JavaScript files are loaded asynchronously using async or deferred using defer attribute. Modernizr: If you need to target some specific features you can use a custom Modernizr to add classes in your <html> tag. **ESLint**: No errors are flagged by ESLint (based on your configuration or standards rules).

## **IMAGES**

14 % Images items are ✓

Optimization: All images are optimized to be rendered in the browser. WebP format could be used for critical

	pages (like Homepage)
•	Picture/Srcset: You use picture/srcset to provide the most appropriate image for the current viewport of the user.
• 🗆	Retina: You provide layout images 2x or 3x, support retina display.
• 🗸	Sprite: Small images are in a sprite file (in the case of icons, they can be in an SVG sprite image).
• 🗆	<b>Width and Height:</b> Set width and height attributes on <img/> if the final rendered image size is known (can be omitted for CSS sizing).
•	Alternative text: All <img/> have an alternative text which describe the image visually.
• 🗆	Lazy loading: Images are lazyloaded (A noscript fallback is always provided).
AC	CESSIBILITY 0 % Accessibility items are ✓
• 🗆	<b>Progressive enhancement:</b> Major functionality like main navigation and search should work without JavaScript enabled.
•	Color contrast: Color contrast should at least pass WCAG AA (AAA for mobile).
•	H1: All pages have an H1 which is not the title of the website.
•	<b>Headings:</b> Headings should be used properly in the right order (H1 to H6).
•	Role banner: <header> has role="banner".</header>
• 🗆	Role navigation: <nav> has role="navigation".</nav>
•	Role main: <main> has role="main".</main>
• 🗆	<b>Specific HTML5 input types are used:</b> This is especially important for mobile devices that show customized keypads and widgets for different types.
• 🗆	<b>Label:</b> A label is associated with each input form element. In case a label can't be displayed, use aria-label instead.
• 🗆	Accessibility standards testing: Use the WAVE tool to test if your page respects the accessibility standards.
• 🗆	<b>Keyboard navigation:</b> Test your website using only your keyboard in a previsible order. All interactive elements are reachable and usable.
• 🗆	Screen-reader: All pages were tested in a screen-reader (VoiceOver, ChromeVox, NVDA or Lynx).
• 🗆	Focus style: If the focus is disabled, it is replaced by visible state in CSS.
PE	RFORMANCE <sup>0 % Performance items are ✓</sup>
• 🗆	Page weight: The weight of each page is between 0 and 500 KB.
• □	Minified HTML: Your HTML is minified.

• 🗆	<b>Lazy loading:</b> Images, scripts and CSS need to be lazy loaded to improve the response time of the current page (See details in their respective sections)
• 🗆	<b>Cookie size:</b> If you are using cookies be sure each cookie doesn't exceed 4096 bytes and your domain name doesn't have more than 20 cookies.
• 🗆	Third party components:
• 🗆	<b>DNS resolution:</b> DNS of third-party services that may be needed are resolved in advance during idle time using dns-prefetch.
• 🗆	<b>Preconnection:</b> DNS lookup, TCP handshake and TLS negotiation with services that will be needed soon is done in advance during idle time using preconnect.
• 🗆	<b>Prefetching:</b> Resources that will be needed soon (e.g. lazy loaded images) are requested in advance during idle time using prefetch.
• 🗆	<b>Preloading:</b> Resources needed in the current page (e.g. scripts placed at the end of <body>) in advance using preload.</body>
• 🗆	Google PageSpeed: All your pages were tested (not only the homepage) and have a score of at least 90/100.
SE	O % SEO items are ✓
• 🗆	Google Analytics: Google Analytics is installed and correctly configured.
• 🗆	Headings logic: Heading text helps to understand the content in the current page.
• 🗆	sitemap.xml: A sitemap.xml exists and was submitted to Google Search Console.
• 🗆	Structured Data: Pages using structured data are tested and are without errors.
• 🗆	Sitemap HTML: An HTML sitemap is provided and is accessible via a link in the footer of your website.
• 🗆	robots.txt: The robots.txt is not blocking webpages.
• 🗆	<b>Structured Data:</b> Pages using structured data are tested and are without errors. Structured data helps crawlers understand the content in the current page.
• 🗆	Sitemap HTML: An HTML sitemap is provided and is accessible via a link in the footer of your website.
